

Automatic Hospital Bed

Zhang Feng from China was hailed as a determined inventor because of his great interest in inventions. His inventions had received 11 copyrights from his country which helped and brought about much convenience to many while simultaneously helping to change many peoples' lives. Hence, he was named "Edison" in his country for his inventions.

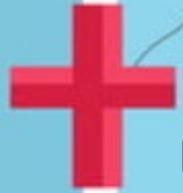

Zhang Feng was from the Anhui province of China, and his education level was only until primary 5. He had been a patrol police officer and had stints as a florist and managing some hotels. Despite his lack of education, he was good in his inventions and innovations. He gave up his current job, and with whatever he had, dedicated his full attention to his inventions with the hope of changing peoples' lives.

With most of his attention given to his invention, he had no idea how long he could sustain his life without a clear indicator of success from his inventions. His accumulated savings of almost 10 years was all spent on his inventions and this got him into a lot of debts.

Automatic Hospital Bed

Due to the series of challenging events, he still did not complain. He even sold balloons on the streets to earn some extra money that he used to buy food for his three family members. Throughout his hard times, he realized that his passion for inventions had never wavered or disappeared and the thought of giving up his invention was something he never gave in to.

Zhang Feng's life took a drastic turn after his uncle had his leg amputated due to bone cancer. Unable to walk unaided, he refused to allow anyone to help move him, especially to the washroom. Most disabled people experience situations like Zhang Feng's uncle. Even though he had a personal caretaker, he did not depend much on him as he knew his personal caretaker needed rest and sleep as well. Whenever he needed help, he would just keep it to himself, especially when he needed to urinate.

Automatic Hospital Bed

When Zhang Feng went back to his hometown in Anhui, he saw how uncomfortable and difficult his uncle's situation was. After seeing and finally understanding his uncle's difficulties, he wanted to reduce the difficulties faced by his uncle as well as other disabled patients by inventing an "automatic hospital bed". Wary of his success, he still wanted to give this invention a go as it could reduce a patient's dependence on others. Zhang Feng was determined to not give up on the invention. He spent countless hours gathering information and conducted further research to bring the design of the "automatic hospital bed" to life.

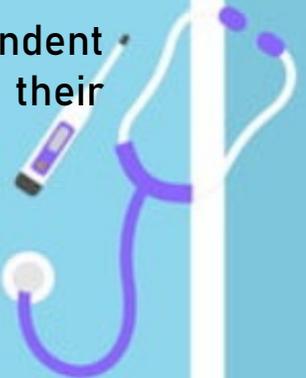

This "automatic hospital bed" that was invented helped ease the lives of many patients and disabled people. With its user-friendly functions and a simple button to press, patients and disabled people could now relieve themselves at their convenience.

After the invention of the "automatic hospital bed", many patients and disabled people became less dependent on others, thanks to its user-friendly functions that helped them to be independent in certain areas of their lives.

Automatic Hospital Bed

Food for Thought:

- ✓ Invention and innovation not only needs determination, but also in learning to accept failures.
- ✓ Invention and innovation comes from the need to fulfill our daily necessities; these 'necessities' are always the catalyst that sparks an invention.
- ✓ We should never give up and always persevere to achieve our dreams and aspirations.
